## BEXREAL

Javier Sordo Castro

beXReal leads digital transformation with Extended Reality (XR) and Artificial Intelligence (AI) solutions, enhancing remote assistance, maintenance, inspection, and operations across industry, construction, and healthcare.

**XR & AI revolutionizing industry: smarter operations, limitless innovation**

### Product & Services

BeXFlow: AI-powered remote assistance platform with augmented reality, designed for industrial maintenance, technical inspections, and after-sales services. Integrates blockchain for security and advanced customization.

## GALDE

Beñat Galdós

Galde is a Data Science product development provider that has been active in the market since early 2020 and was incorporated as a Limited Company in 2022.

**From data to decisions,  
clarity with AI**

### Product & Services

Together, these solutions empower businesses to embrace digital transformation with cutting-edge, adaptable, and efficient XR tools.

# IMAGERYST

Ángela del Carmen

Imageryst helps energy and construction companies remotely monitor and analyze their assets, saving time and costs while improving project control. From land analysis for pre-construction to the monitoring of wind farms and solar plants, Imageryst provides accurate, up-to-date information using satellite imagery for efficient asset management.

**A 360° platform for the planning and execution of energy projects remotely**

## Product & Services

CircularPass is an advanced Digital Product Passport solution designed to drive sustainability and promote the circular economy. It ensures comprehensive traceability of materials and products throughout the entire value chain, guaranteeing transparency, seamless regulatory compliance for EU trade, and optimized operational efficiency. With CircularPass, companies gain a practical tool to comply with emerging regulations, optimize processes, and strengthen their commitment to sustainability, positioning themselves as strategic allies in the transition to a circular future. Additionally, we introduce CircularTrust, a blockchain platform based on Hyperledger Fabric, we are a founding partner and developer. CircularPass benefits from this robust infrastructure, ensuring interoperability, data security, and scalability, delivering a reliable, cost-effective, and adaptable solution to meet evolving market demand.

## LIZCORE SYSTEM

Edgar Casanovas

Lizcore System is digitizing the growing climbing market. With our system, climbing gyms have gamification, analysis, and security for their customers. Our hardware and software as a service (SaaS) offers access control, user and route management, and improves the customer experience in terms of motivation and safety.

**Unleash your climbing data. Lizcore: Safer climbs, smarter progress**

### Product & Services

We develop eVTOL (electric vertical takeoff and landing) aircraft –Integrity– for passenger and cargo transportation, powered by our patented FlyFree technology. Featuring a unique stability system, our aircraft ensure maximum safety throughout all phases of flight.

# VIUPIK

Ramón Gea Mena

Viupik specializes in creating interactive 3D visualization solutions that enhance product and project presentation, sales, and management. Through 3D digital twins, it allows organizations to visualize their projects immersively, integrate real-time data, and optimize business processes. Viupik primarily serves industries such as real estate, engineering, and technology, enabling better decision-making and accelerating sales cycles.

Viupik provides interactive 3D visualization solutions to enhance sales and management in real estate, engineering, and technology. Our product Twin creates 3D digital twins with data integration for advanced visits and analysis. Viupik also produces renders, videos, and interactive tours, allowing companies to showcase their projects and products in an immersive way. With Viupik, businesses can improve decision-making, optimize processes, and shorten sales cycle.

## Product & Services

# WINAHOST

Jordi Aracil

Traveltech platform for short-term property rental management (vacation and temporary) based on data and AI. We provide end-to-end service (pre-booking, booking, post-booking), we operate B2C segment (owners) and B2B segment (residential complexes and tourist apartments) segments. Our system is connected to the main tourist and rental reservation portals (Booking, Airbnb, VRBO, Holidu, Expedia and others), we centralize in one unique calendar the bookings and rentals of each property, and through data and AI we manage pricing optimization, maximizing occupancy and profitability of the owners. Our core is based on a data driven model, we are developing forecasting systems and calculators that allow to estimate the owners future profitability and income and allow us to establish our geographic scaling model local and global.

**Comprehensive short-term property rental management platform based on Data and AI aimed at maximizing the profitability of individual properties, vacation rentals or residential complexes**
